

AIR INTAKE FOR ORIGINAL LAMP TRIM

311,60€

36170-001. Probably the most radical weight optimisation (up to 2800 g lighter) for the BMW S 1000 RR and simultaneously an impressive redesign! In addition, sensible changes have been made to many details that improve the aerodynamics, reduce the weight again and guarantee a more sporty line. The lamp trim is thus a single unit with integrated suction intake. Extremely lightweight and strong carbon fibre hybrid material (carbon) which is coated with a glossy rigid plastic protective coating that penetrates into the material and guarantees optimum protection. Easily swapped with original. With ABE. Weight approx. 180g
