

ALUMINIUM COVER FOR TELELEVER JOINT

31,20€

34110-001. Just the right finishing touch for the technically elaborate and high-quality finished Telelever system. The facts: Crowning glory for the telelever system. Considerably more stable and resistant to oxidation. Secure locking with set screw. Simple exchange for original plastic cap. Made entirely from CNC turned/milled aluminium. Anodised silver. Made in Germany.. The brittle and cheap looking original plastic cover usually flies off anyway - the exposed and quickly oxidising bolt is not exactly an attractive alternative either.
