

CARBON INJECTOR COVER R1200 LC

187,50€

43763-700. The injector cover made of carbon screws on to the vehicle on existing hold points. It completes the vehicle and allows for additional protection of the vehicle from damages. The cover is mounted on the original attachment points. The carbon part is made completely of pre-preg material in accordance with the newest guidelines in autoclaves and in the next step covered with a plastic cover to protect against impacts on the environment. This plastic covering exceeds the customary clear lacquer covering in the protective effect, scratch resistance, and durability to a large degree. But the covering does not only score technically, it also clearly underscores the three-dimensional effect of the carbon structure.
