

CASE SYSTEM CUT OUT F 800 GS

1248,33€

30060-201. Xplorer cut out case systems | Large volumes with low structural width

The set developed exclusively for selected motorcycle models consists of the stainless steel case carrier and two Xplorer aluminium cases. The recess of the 37L Xplorer cut out case means it elegantly nestles against the motorcycle exhaust.

The other side is enhanced by the 40L Xplorer version of the test winner (Motorrad 16/12). In this combination, the structural width is reduced and the case system appears symmetrical. Riding safety and comfort are also improved because the centre of gravity moves to the centre of the motorcycle. The cases captivate with highly impact-resistant plastic and anodised sheeting which guarantee high abrasion resistance.

The securely screw case carrier is made of polished, 2 mm-thick stainless steel pipe with 16 mm diameter and is thus suitable for every adventure. The system is light but still very stable.

Carrier: Suitable for adventures, weather-resistant and securely screwed case carrier made of stainless steel

Case carrier is blasted and electropolished

Overall structural width only approx. one metre, depending on motorcycle

Includes easy to understand assembly instructions

Case: On muffler side with recessed 37L Xplorer case

Highly impact-resistant plastic and anodised aluminium sheeting

With keys and lock cylinders

Optional extensive accessories

Luggage extension possible with top bags

Seamless spare parts provision
