##R 1200 ST  
(only with top yoke conversion)

The inexpensive and practical alternative to electronic speed regulation. Relaxed long distance tours are now possible and don't involve pain in the wrist. The user friendly adjustment mechanism (simply rotate the adjustment wheel forwards) makes a continuous and individual locking of the gas handle possible.

The adjuster can be set so that the twist grip either slowly rolls back or remains at a fixed position. The speed can be precisely set for long riding stints.

When not in use the CruiseControl is not noticed and the throttle returns to normal function. The entire adjustment mechanism is housed in the right handlebar end weight. By turning the adjustment wheel the CruiseControl applies pressure onto the twist grip. With the aluminium kit you can also add a shine to your vehicle's appearance and save a lot of weight as well.

The facts:

The light weight kit (includes also the left handlebar weight end) is the perfect alternative to the original.

Anodised black Aluminium

Includes also the left handlebar weight end

Blue adjustment wheel

Please note: Only suitable if both handlebar end weights has the length of 26,5 mm.
