F 800 GS (- 07/2012)
(ohne original Handprotektoren)

F 800 R (- 2011)
F 800 R (2012 - 2014)

The inexpensive and practical alternative to electronic speed regulation. Mega-tours are now possible that are relaxed and don't involve pain in the wrist. The easy-to-use adjustment mechanism (simply rotate built-in adjustment wheel forwards) makes a continuous and individual locking of the throttle possible. This allows it to be set whether the desired gas setting slowly returns to a previous state or if it remains constant. The speed can be set exactly for long-distance stages. When it is switched off, the mechanism cannot be noticed at all. The entire adjustment mechanism is housed in the right handlebar end weight and increases the lateral pressure on the gas handle in accordance with its setting.

Teflon-mounted adjustment mechanism. Simple conversion. Complete aluminium replacement units for left and right handlebar end weights.

* Does not fit with ACERBIS DualRoad and Original hand protectors.
