

DIAGNOSTIC TOOL GS-911 WIFI VERSION OBD2 – RED

469,00€

44610-400. The GS-911 is a diagnostic tool to execute diagnostic functions like „Error – read and delete“ on modern BMW's motorbikes. It consists of a GS-911 Interface for PC's with USB connection and the GS-911 diagnostic software. Depending on the model there are three versions with WiFi data transfer available. They can additionally work on Win Mobile (5/6) or on Java based software or platform, independently on a browser over mobile terminal devices like mobile phones, smartphones and Blackberrys. The WiFi version is consequently also suitable for Apple iOS (iPhone, iPad).

The facts: Hobby / Enthusiast version – storage of up to 10 chassis numbers possible.
Menu navigation in english and german language.
