

ILMBERGER REAR HUGGER – CARBON R 1250 GS/GSA

~~394,90€~~ **249,00€**

The **complete and best protection** for the severely strained shock absorber, as well as for the battery, the exhaust system including collector and the base of the rear frame. Moisture and dirt are no longer whirled on the lower legs and feet of the driver and passenger and can not reach to the depths of the technique.

A must-have for everybody who cares about the co-driver, the GS and its technique. The filigree mounting on the cardan merges into the high-quality carbon fibre protection and forms a homogeneous sporty unit.

Easy and stable mounting.

Ilmberger uses pre-impregnated carbon fibre matrices for the high-quality carbon. The fibre volume is dimensions and the alignment of the individual fibres is defined. The matrix is then laminated bubble-free by hand and coated twice with a protective layer. The added clear varnish layer protects and emphasises the three-dimensional effect of the carbon structure. After hardening in the autoclave, the carbon components satisfy even the highest demands and requirements.

This space age material unfolds its full potential with up to 70% weight decrease compared to the standard part and its weight-specific stiffness. Form follows function here and integrates optimally into the design of the motorcycle. The contours of the machine are incorporated as well as the material and surface texture of neighbouring series components. This carbon

component underscores the high-tech claim of your BMW with the unique appeal of real carbon.

The facts:**Function**

- Upgrades your BMW
- Mounted on the original attachment points
- High-quality carbon
- Weight saving of up to 70% compared to the original part

Technical data

- Material: Carbon, high-quality, hand-crafted

Particularities

- Included German Type approval
 - Made in Europe

SKU: 43760-200
