

MOTO MASTER BRAKE DISC REAR

120,90€

36620-000. The Moto-Master brake discs with perforated brake surface have been developed in motorcycle racing. All brake discs are made from hardened and refined chrome-moly alloy steel. This ensures dimensional stability, low vibration and the highest braking performance, even at extremely high heat. The brake discs are precision laser cut, CNC milled and surface machined for a perfect fit and exceptionally sporty look. The computer-assisted design allows for self-cleaning of the brake disc, as well as optimum temperature distribution and heat dissipation. All brake pad compounds can be used; however, we recommend the sintered metal pads by TRW Lucas. The item comes complete with a General Operating Licence (ABE).
