

MUDSLING INNER FENDER R NINET

187,50€

40822-002. The MudSling inner fender made of high stability, tough ABS plastic not only protects the narrow parts of the rear frame as well as the shock and parts of the drive. Thanks to refined, effective design, the rider's and passenger's legs are also protected significantly better against spray and dirt.

This investment pays off after only a short amount of time since the rugged tail section not only reliably protects against the grime of the road but also against impacts from stones and thus also the resulting, increased corrosion.

The mudguard is made of shatter-proof, impact-resistant ABS plastic and can be easily mounted in just a few steps and offers unshakeable protection even with the heaviest of use over rough terrain. Its refined design ensures it integrates excellently into the design of the R nineT. TÜV registration is not required.

The facts:

Fits all R nineT models

The well-designed construction ensures the highest functionality, durability and long lifespan

Manufactured on the latest injection moulding machines

Consistent component thickness of 3 mm

Protects the rear shock absorber, tail section, rider and passenger against water and dirt

Perfectly formed integrated design

Mounts easily in seconds

Delivery: Inner fender, mounting material and mounting instruction

SKU: 40822-002
