

PROTECTION BARS – SILVER R1150GS & ADVENTURE

280,30€

R 1150 GS t
R 1150 GS Adventure t

In order to finally combine perfect protection and innovative design, we have developed for the R 1150 GS and Adventure an all-round protection system based on our own ideas.

The result has been a great success and the complex design work now keeps the GS safe from damage.

The bars form a homogenous line with the cylinders and the header pipes; rather than coming across as an alien element, they are integrated into the machine perfectly. All mounting points have been designed for a tensile or compressive load. The leverage forces are distributed across all six mounting points in the case of a crash.

The central mount provides uniform distribution and functions as a pivotal point, which incorporates all of the other suspension points equally in the absorption of forces in the case of an “incident”.

Our idea has been met with enthusiasm all over the world. In the relevant Internet forums, people are saying that our development is one of the best crash bars for the R 1150 GS and Adventure.

The facts:

Uniform distribution of forces.

Stabile mounts.

Additional protection for headers and connecting pipe.

The sensitive screw threads in the engine housing cannot be pulled out.

All maintenance work (oil change, valve adjustment etc.) is possible without removing the crash bars.

Elaborately bent round tubes.

No negative impact on ground or cornering clearance.

Mounts for additional lights.

Made in Europe.
