

ILMBERGER REAR HUGGER – CARBON R 1200 R (- 2014) R NINET (2014 –) R NINET RACER

363,70€

The complete and best **protection** for the otherwise so badly strained shock, and for the battery, the exhaust system including the collector and the base of the rear frame. Thus, moisture and dirt can not be spun freely on the lower legs and feet of the passenger and not penetrate to the depths of the art too.

A must for anyone who loves his **R 1200 R** and pillion, and want to see the technology is well protected. The filigree holder on the shaft drive gearbox is swung over into the high-quality carbon fiber protection and results in a homogeneous unit sports. Easy and secure mounting.

Ilmberger uses pre-impregnated carbon fibre matrices for the high-quality carbon. The fibre volume is dimensions and the alignment of the individual fibres is defined. The matrix is then laminated bubble-free by hand and coated twice with a protective layer. The added clear varnish layer protects and emphasises the three-dimensional effect of the carbon structure. After hardening in the autoclave, the carbon components satisfy even the highest demands and requirements.

This space age material unfolds its full potential with up to 70% weight decrease compared to the standard part and its weight-specific stiffness. Form follows function here and integrates optimally into the design of the motorcycle. The contours of the machine are incorporated as well as the material and surface texture of neighbouring series components. This carbon component underscores the high-tech claim of your BMW with the unique appeal of real carbon.

The facts:

Function

- Upgrades your BMW
- Mounted on the original attachment points
- High-quality carbon
- Weight saving of up to 70% compared to the original part

Technical data

- Material: Carbon, high-quality, hand-crafted

For R1200R with ESA, R nineT with and without ESA.
