

UNIVERSAL LICENCE PLATE HOLDER

31,50€

38654-000. The suitable licence plate holder made of stainless steel that can be used universally on our GFK mudguard but can also be adapted to the aluminium fender. We don't bend this licence plate holder since the bend radius can vary massively depending on the conversion and design of the rear mudguard. TÜV prescribes an angle of 0 to maximum 30 degrees here so that the licence plate remains legible. The licence plate holder also comes with two drilled holes on the bottom end so that the cat's eye (reflector) also prescribed by TÜV can be mounted.
