A revolution in ergonomics, usability, safety and exclusivity:

We have developed brake and clutch levers with adjustable lever length and reach that can be optimally adjusted to match your individual needs.

Simply loosen the fixing screw and the lever length can be changed to suit your personal requirements.

For the R 1200 GS LC model with the very effective brake it would be ideal to have better feel with less applied force, i.e. reduced lever length.

TheVarioLever makes it possible to brake using only two or three fingers without pinching the other fingers.

An enormous relief for street, touring or racing applications. This also applies to the clutch lever. Of course, when the lever is completely extended

(roughly corresponding to the length of the original lever) it is possible to brake with all four fingers again. Another innovation is the easy adjustability of the lever reach, which can easily be applied whilst riding - important to compensate for brake fade (e.g. at high load, fast mountain bends). In addition, the reach can be changed to bring the lever closer to the handlebar, making it easier to reach. This is made possible by a large rotating adjuster that can easily be operated even when wearing thick gloves.

The extraordinarily intricate construction is also extremely robust: Even when the lever is fully extended, forces of more than 60 kg/132 lb can be transmitted without difficulty at the outer tip. The modular construction opens up a whole range of colour combination options.

We' ve selected what we consider the most attractive colour combinations. Made of strong aluminium (AL 7075 T6), the preferred type for aerospace applications.
ABE approved.
