

WUNDERLICH FLAPS »MARATHON-PLUS«

~~197,90€~~ **69,00€**

44830-005. A tiny action with an amazing effect. Annoying turbulences often arise due to a number of issues. The standard screens are just part of this problem. To make sure you can enjoy real optimisation, it's necessary to develop a total concept for optimum wind pressure relief.

That's why we designed these flaps for the S 1000 XR. These flaps effectively protect the XR rider from wind and weather influences that flow off to the side of the cockpit and reliably prevent turbulence in this area. The problems that arise here on an unprotected XR could even still have a negative impact on the excellent touring screens we have developed. Even used together with the original screens, our flaps often achieve astounding improvements.

The facts:

- Ideal addition to the standard screen and our XR screens
- Effective protection from turbulences
- Made of five mm thick shatter-proof and scratch-proof acrylic plastic
- Available in transparent or smoke grey
- Easy mounting on the existing points
- Complete delivery incl. mounting material
- TÜV approved
