

WUNDERLICH FUEL INJECTION SYSTEM COVER

72,80€

42940-502. The cover of the fuel injection system protects the intake pipe area including the injector tube, line connections and the throttle sensor. Time and time again, the plug-in connections come loose because they keep getting caught again and again on your boots or trousers. This protective cover made of anodised aluminium means this is no longer possible.

Also provides tamper protection for the plug and connector.

The cover visually incorporates the contour of the machine and integrates into this as well as integrating optimally into the overall bike concept thanks to the high-quality material.

The facts: Function Reliable protection for vulnerable line connections, connectors, the throttle sensor and the injector tube

Tamper protection (plug and connector)

Abrasion protection for complete injection and suction unit

The well-thought out design is stable and almost indestructible Technical infoMaterial:

Aluminium, anodised

Colour: black

Scope of delivery includes mounting kit

Easy fitting Features 5-year warranty
