

WUNDERLICH ON BOARD TOOL SET

52,00€

This handy kit features our MultiTool combined with all needed Torx bits and it makes it possible to remove nearly all fairing parts and as well as the front wheel.

For loosening and tightening many fasteners, the MultiTool functions as a screwdriver handle in combination with the supplied bits. If the fasteners are too tight (such as front axle bolts, rear wheel bolts, etc.) The screwdriver of the original tool kit can be used as a lever by passing it through the hole.

Tip: The large Torx that is needed for the removal of the rear wheel is not a size that you will find everywhere. Therefore carrying the correct tools with you is a good idea to ensure that you can get the work done on your bike, even if you don't do it yourself.

Note: Maximum torque of 100 NM/73 ft.-lbs can be applied to the hexagon (but not for the bit insert!)

This set includes:

Wunderlich MultiTool
Torx Bits made in Germany (20/25/27/30/40/45/50)
Leather pouch

These are very high quality, workshop grade Torx bits that are made to last!
